Work Authorization: L2 EAD — authorized to work for any U.S. employer; no visa sponsorship required

PROFESSIONAL SUMMARY

Business Analyst with 7+ years of experience across enterprise software, SaaS-style platforms, health insurance, insurance billing, financial systems, and rules-driven business applications. Strong in requirements gathering, process analysis, functional specifications, business rules, user stories, acceptance criteria, process mapping, traceability, UAT, validation, and stakeholder management. Hands-on with Generative AI, LLM-assisted analysis, AI assistants, SQL, Power BI, Excel, Jira, Azure DevOps, Confluence, Visio, and Postman. Experienced partnering with Product, Engineering, QA, and business stakeholders to turn complex and unstructured needs into structured, testable requirements and measurable process improvements.

CORE SKILLS

- Requirements & Business Analysis: requirements elicitation, discovery workshops, stakeholder interviews, facilitation, BRD, FRD, SRS, functional specifications
- Process & Solution Analysis: As-Is / To-Be, process mapping, gap analysis, impact analysis, business rules, workflow analysis, solution definition, dependency analysis
- AI & Automation: Generative AI, LLM-assisted analysis, AI assistants, prompt-based requirements analysis, AI-generated user stories/acceptance criteria/test scenarios, business-rule validation of AI output
- Validation & Quality: acceptance criteria, validation frameworks, test strategies, UAT, defect triage, traceability, data validation, reconciliation, release readiness, audit-ready documentation
- Agile & Delivery: Agile/Scrum, backlog management, sprint planning, backlog refinement, release planning, cross-functional alignment, Product/Engineering/QA collaboration
- Data & Reporting: SQL joins/filtering/aggregation, Power BI, DAX, Advanced Excel, KPI dashboards, operational metrics, data analysis
- Tools: Jira, Azure DevOps, Confluence, MS Visio, Lucidchart, Postman/Swagger, Microsoft Office
- Domains: Health Insurance, Insurance Billing, Enterprise Software, Financial Systems, Transaction Processing, Regulatory/Compliance Platforms, E-commerce

PROFESSIONAL EXPERIENCE

Senior Product Owner / Business Systems Analyst | JNET Technologies Pvt. Ltd. | 03/2023 – 03/2026
Domain: Healthcare / Health Insurance — rules-driven enterprise platform

- Led discovery and requirements workshops with business stakeholders, translating complex healthcare and health-insurance operational needs into functional requirements, business rules, workflows, and structured solution definitions.
- Partnered with Product, Engineering, QA, and business teams to prioritize backlog items, clarify dependencies, resolve requirement gaps, and maintain alignment through delivery and release readiness.
- Used Generative AI and AI assistants to accelerate requirements analysis, documentation, user stories, acceptance criteria, gap identification, and test-scenario preparation; validated every AI-generated output against business rules and source requirements.
- Created BRDs, FRDs, SRS, user stories, acceptance criteria, process flows, business rules, and validation scenarios that provided clear, testable direction to development and QA teams.
- Defined workflow validations, alerts, and business-rule checks that reduced manual intervention by 30% and improved operational tracking by 25%.
- Led UAT and validation activities including test-scenario review, requirement traceability, defect validation, retesting, stakeholder sign-off, and release readiness; supported 95% on-time delivery and reduced defect leakage by 20%.
- Used SQL joins, filters, and aggregations for data validation, reconciliation, discrepancy investigation, and verification of backend results; supported Power BI dashboards for workflow status, transaction activity, operational KPIs, and data quality.
- Mentored junior Business Analysts and promoted consistent requirements-management and documentation practices across the team.
- Supported basic API testing with Postman/Swagger by validating requests, responses, status codes, and expected results during functional verification and UAT.

Technical Product Specialist / Business Analyst | Kennovation Software Services Pvt. Ltd. | 05/2021 – 03/2023
Domain: Healthcare / Health Insurance — billing, payment, and transaction workflows

- Supported requirements and functional analysis for health-insurance billing and payment workflows, translating business needs into clear system requirements, business rules, user stories, acceptance criteria, and process flows.
- Analyzed end-to-end billing and transaction processes, including billing events, premium/payment processing, validation rules, exceptions, adjustments, downstream dependencies, and reporting requirements.
- Led stakeholder discussions and requirement walkthroughs to clarify incomplete requests, identify process gaps, assess impacts, and align business and technology teams on practical solutions.
- Created current-state and future-state process maps in MS Visio and documented functional specifications to support development, QA, UAT, and implementation activities.
- Performed data validation, reconciliation, and root-cause analysis across healthcare billing and transaction data; worked with technical teams to resolve discrepancies and improve data consistency by 20%.

- Defined KPI and operational reporting requirements to measure processing efficiency, transaction status, exceptions, and workflow performance; contributed to a 25% improvement in processing efficiency.
- Supported UAT, defect clarification, retesting, and release readiness by validating delivered functionality against requirements and acceptance criteria.
- Supported pre-sales discovery by gathering prospective-client requirements, preparing solution and requirements documents, and coordinating with Development and QA teams on demo applications.

Business Analyst | Orangebits Software Technologies | 01/2021 – 04/2021
Domain: E-commerce / Retail — enterprise web and CRM platforms

- Led requirements for e-commerce and web-platform enhancements; created BRDs, user stories, acceptance criteria, and wireframes for 5+ features, reducing development rework by 20%.
- Supported Agile ceremonies, UAT, defect clarification, release readiness, and stakeholder communication while tracking feature performance and customer metrics.

Business Analyst | Gigante Technologies | 03/2019 – 12/2020
Domain: Health Insurance / Insurance Billing — billing and financial transaction workflows

- Documented functional requirements for health-insurance billing and transaction workflows, including business rules, validation logic, payment processing, downstream dependencies, and operational reporting.
- Performed data validation and reconciliation across customer, billing, transaction, and KPI data to identify mismatches and support root-cause analysis.
- Performed As-Is / To-Be analysis to identify workflow gaps, manual steps, business-rule issues, and opportunities for process improvement.
- Translated complex business needs into BRDs, FRDs, functional specifications, user stories, acceptance criteria, process flows, and wireframes for development and QA.
- Supported UAT, defect clarification, retesting, stakeholder communication, and release readiness to ensure delivered functionality matched approved requirements.

AI / ENTERPRISE SOLUTION ALIGNMENT

- Generative AI / LLM-assisted requirements analysis and documentation; experienced validating AI output against source requirements, business rules, data, and expected outcomes.
- Experience translating ambiguous business needs into structured functional specifications, acceptance criteria, validation scenarios, process maps, and measurable success metrics.
- Cross-functional collaboration with Product, Engineering, QA, technical teams, and business/domain stakeholders; comfortable facilitating discovery and alignment sessions.
- Strong transferable experience for AI-driven enterprise solution initiatives involving workflow automation, intelligent recommendations, implementation acceleration, validation, explainability, and governance.

TECHNICAL SKILLS

- Business Analysis: Requirements elicitation, stakeholder workshops, BRD, FRD, SRS, functional specifications, user stories, acceptance criteria, business rules, process mapping, gap/impact analysis, traceability, UAT
- AI & Automation: Generative AI, LLM-assisted analysis, AI assistants, AI-generated documentation/test scenarios, business-rule validation
- Data & Reporting: SQL (joins, filtering, aggregation), Power BI, DAX, Advanced Excel, data validation, reconciliation, KPI dashboards
- Agile & Tools: Agile/Scrum, sprint planning, backlog refinement, Jira, Azure DevOps, Confluence, Visio, Lucidchart, Postman/Swagger

EDUCATION & CERTIFICATIONS

MBA, Marketing | MIT School of Business, Pune, India | 2017 – 2019
Bachelor of Engineering, Computer Science | S.B. Jain Institute of Technology, Nagpur, India | 2012 – 2016
Certifications: Advanced Certified Business Analyst | SQL Certification | Generative AI Certification
