Business Requirements Document (BRD)

Member Premium Payment Portal

Prepared by: Shweta Mahajan, Senior Business Analyst | **Version:** 1.0 | **Status:** Approved for development

Portfolio sample. Northwind Health Plan is a fictional company, and all data, rules, and figures are invented for illustration. No real client information is used.

1. Document Control

Item	Detail
Project	Member Premium Payment Portal
Business Sponsor	Director, Member Billing (fictional)
Prepared by	Shweta Mahajan, Business Analyst
Stakeholders	Member Billing, Finance, Customer Service, IT, QA, Compliance
Methodology	Agile (Scrum), two-week sprints

2. Purpose and Background

Northwind Health Plan members currently pay monthly premiums by mail, by phone, or through a basic web form. Billing staff then match payments to member accounts by hand. This causes posting delays, mismatched amounts, duplicate payments, and a high volume of calls to Customer Service.

This document defines the business requirements for a self-service online payment portal that lets members view and pay premiums, and gives Billing staff a clear way to handle exceptions.3. Business Objectives

ID	Objective	Success Measure
OBJ-1	Reduce manual payment posting	30% fewer payments needing manual handling within 6 months
OBJ-2	Speed up posting	95% of online payments posted within 2 minutes of confirmation
OBJ-3	Reduce payment-related calls	20% drop in billing calls to Customer Service
OBJ-4	Improve data accuracy	Fewer than 1% of payments requiring correction after posting

4. Scope

In scope

- Member login and premium balance view
- Online payment by bank account (ACH) or debit/credit card
- Payment validation, duplicate detection, and posting
- Email confirmation and failure notifications
- Billing exception queue and audit log
- Payment status reporting for Billing management

Out of scope

- Claims processing and benefit changes
- Employer group billing
- Refund processing (planned for a later release)
- Mobile app (web responsive only)

5. Stakeholders and Users

Role	Needs
Member	A fast, simple way to see what is due and pay it
Billing Specialist	A clear queue of payments that need review
Billing Manager	Visibility into payment volumes and exceptions
Customer Service	Payment history to answer member questions
Compliance	Audit trail and secure handling of payment data

6. Business Requirements

ID	Requirement	Priority
BR-01	Members must be able to view their current premium amount, due date, and grace period status.	High
BR-02	Members must be able to pay online by ACH or card.	High
BR-03	The system must compare each payment to the billed amount and flag any mismatch before posting.	High
BR-04	The system must post a confirmed payment to the member account within 2 minutes.	High
BR-05	The system must detect and block duplicate payments for the same billing period.	High
BR-06	The system must notify the member when a payment fails and allow a retry.	Medium
BR-07	Billing staff must have an exception queue with a full audit log of actions taken.	High
BR-08	Billing management must have a dashboard of payment status and exception metrics.	Medium

7. Business Rules

ID	Rule
RULE-1	A payment must equal the billed amount. Partial or overpaid amounts are held for Billing review and are not posted automatically.
RULE-2	Only one successful payment is allowed per billing period. A second attempt is blocked with a clear message.
RULE-3	Payments made within the 30-day grace period keep coverage active. Payments after the grace period go to Billing review.
RULE-4	Failed payments allow up to 3 retries in a 24-hour period.
RULE-5	Every posting, hold, and manual override is recorded with user, date, and time.

8. Process Overview (To-Be)

1. The member logs in and sees the premium due.
2. The member selects a payment method and submits payment.
3. The system validates the amount and checks for duplicates.
4. If valid, the payment is sent to the payment gateway.
5. If confirmed, the system posts it to the member account within 2 minutes and sends a confirmation.
6. If the amount does not match, or the payment is late, it is flagged and placed in the Billing exception queue.
7. If the payment fails, the member is notified and may retry.

A visual process flow accompanies this document.

9. Non-Functional Requirements

Area	Requirement
Performance	Payment page loads in under 3 seconds under normal load
Availability	99.5% uptime, excluding planned maintenance
Security	Payment details are encrypted and not stored in the portal
Audit	All posting and override actions are logged and kept for 7 years
Accessibility	Meets WCAG 2.1 AA

10. Assumptions, Constraints, and Dependencies

- A third-party payment gateway is already contracted.
- The existing billing system will remain the system of record.
- Member login uses the current identity service.

- Go-live depends on the billing system API being ready by Sprint 4.

11. Risks

Risk	Impact	Mitigation
Billing API delivered late	Release delay	Agree on API contract in Sprint 1; use mock service for early testing
Mismatch rules too strict	Large exception queue	Review exception volumes in UAT and adjust thresholds
Members confused by blocked duplicates	More calls to support	Clear on-screen messaging, tested in UAT

12. Acceptance and Sign-Off

UAT is complete when all High-priority requirements pass in test, there are no open critical defects, and the Business Sponsor and QA Lead approve release readiness. Traceability from each requirement to user story and test case is tracked in the accompanying Requirements Traceability Matrix.

Role	Name	Date
Business Sponsor	(sample)	
QA Lead	(sample)	
Product Owner	(sample)
